Why Choose the COOLTRON CEZ0004X-B01?

The COOLTRON air-flow monitor switch, or CEZ0004X-B01, provides a simple alternative to indicate positive or negative air flow of fans or blowers. When properly installed and connected in series with an optical (i.e. LED) or audible signaling device, a bi-directional switch will activate an electrical contact if the air flow of the fan falls below 8.2 ft/s, turning the signaling device on or off. The COOLTRON monitor CEZ0004X-B01 includes a 120mm plastic fan guard.
